

Agentforce Hackathon — Progress Update

Changes since yesterday on the workshop package & guide

Prepared 12 June 2026 · branch `main` · commits `5b925e3` → `8d2e64a`

Heads-up on what's next: we are currently building an agent for a new use case — **report generation**. The work below is the foundation (note-capture agent, packaging, asset library) that the report-generation agent will extend.

At a glance

- **New agent action shipped** — a "Create Note" action now lives in the agent asset library, ready to drop into an agent in Agent Studio.
- **Notes UI added** — a dedicated Notes tab in the workshop app for capturing and viewing notes.
- **Packaging matured** — the installable package advanced to **v0.1.0.10** with cleaner project structure and zero post-deploy steps.
- **Repo cleanup** — removed the legacy `command-center/` tooling and reorganised the project; ~4,200 lines of dead scaffolding deleted.
- **Workshop test data added** — realistic MidOcean meeting transcript + board description for dry-runs.
- **36/36 Apex tests passing.**

What changed, in detail

1. "Create Note" agent action new asset

- New `GenAiFunction Employee_Agent_Create_Note` wrapping the `HtmlNoteService` Apex invocable (`invocationTargetType=apex`).
- Inputs: *Subject / Content* (HTML, stored as a Blob so it renders) / optional *Record Id*.
- Returns the full created `ContentDocument` record, so the agent surfaces a clickable link in chat.
- Ships inside the package — attendees just *add* it to their agent; no code, no CLI.

2. Notes UI tab

- New `Employee_Agent_Workshop_Notes` FlexiPage hosting the `noteCapture` + `noteViewer` LWCs.
- Added to the Lightning app navigation and granted via the workshop permission set.

3. Agent deployment polish

- Duplicate agents now get a distinct label (e.g. *"Employee Agent V1 (2)"*) so copies are tellable apart in Agent Studio.
- Reworked `agentDeployButton` LWC and `NextGenAgentDeployer` Apex.

4. Packaging & project structure

- Package bumped to **v0.1.0.10** (`04tWt000000GF05IA0`); install URL updated across Apex and the web guide.

- Note suite folded *into* the package — installs on any org type with zero post-deploy.
- Removed the legacy `command-center/` portal and scripts; moved `secret_guard.mjs` to `scripts/`.

5. Workshop test data new

- `docs/test-data/midocean-granola-transcript.md` — a realistic meeting transcript for testing the note agent.
- `docs/test-data/midocean-lucid-board-description.md` — a board description as a second input source.

Commits since yesterday

Commit	Date	Summary
8d2e64a	12 Jun	Add MidOcean workshop test data (Lucid board description + Granola transcript)
748dec8	12 Jun	Add Create Note agent action + Notes tab; package v0.1.0.10
6cae98e	12 Jun	Updated package and reorganised project
f355e65	12 Jun	Update package install URL to 0.1.0-6

Baseline: `5b925e3` (initial commit, 11 Jun).

Change footprint

Area	Notes
Apex	Updated <code>HtmlNoteService</code> , <code>NextGenAgentDeployer</code> , <code>WorkshopSetupController</code> + tests
Metadata	Added <code>GenAiFunction</code> , <code>Notes FlexiPage</code> , <code>Notes</code> tab; perm-set & app updates
Web guide	Install URL refreshed in <code>MainContent.jsx</code>
Cleanup	Removed <code>command-center</code> tooling (~4,200 lines)
Net	75 files changed · +1,013 / -4,186 lines

Up next

- **Report-generation agent** — we are currently creating an agent for this use case (the active focus).
- Summarize prompt template + Part-B action add-ons (Query Records, draft email, Search Web, fetch tasks).
- Finalize starter-agent reasoning instructions and remaining guide polish.
